

Viviane Aguiar Silva Simões

Junior Node.js Fullstack Developer

Location: Juiz de Fora - MG, Brazil | Email: vivianeaguiarc@outlook.com | Phone: +55 (21) 96738-0550
LinkedIn: [linkedin.com/in/vivianeaguiarc](https://www.linkedin.com/in/vivianeaguiarc) | GitHub: github.com/vivianeaguiarc

PROFESSIONAL SUMMARY

Results-oriented Node.js Fullstack Developer specializing in building robust, scalable RESTful APIs and modern web applications. Proficient in Node.js, TypeScript, Express, Prisma, PostgreSQL, and MySQL. Hands-on experience implementing JWT authentication, Role-Based Access Control (RBAC), multi-tenancy boundaries, and comprehensive Swagger/OpenAPI documentation. Adept at leveraging Docker containerization, configuring automated CI/CD pipelines via GitHub Actions, executing test-driven workflows with Vitest, and evolving software architectures toward Clean Architecture principles. Holds a Postgraduate degree in System Architecture and actively completing a Bachelor's in Software Engineering.

CORE TECHNICAL SKILLS

- Backend & Core: Node.js, TypeScript, JavaScript, Express, RESTful APIs, Clean Architecture
- Frontend & Web: React, Next.js, HTML5, CSS3
- Databases & Caching: PostgreSQL, MySQL, Redis, MongoDB, Prisma ORM, SQL
- DevOps & Testing: Docker, CI/CD, GitHub Actions, Git, Linux, Vitest, Swagger, OpenAPI

FEATURED PROJECTS

StockFlow API – Multi-Tenant SaaS Inventory Management

Engineered a scalable multi-tenant SaaS application backend focused on secure stock management using Node.js, TypeScript, Express, Prisma, PostgreSQL, and Redis.

- Implemented token-based secure authentication with JWT alongside customized Role-Based Access Control (RBAC).
- Integrated API rate limiting protocols, detailed system logging/auditing, and comprehensive interactive Swagger endpoints.
- Automated deployment and staging workflows using Docker multi-stage builds and specialized CI/CD automation pipelines.
- Repository: github.com/vivianeaguiarc/StockFlow-api
- Live Deployment: stock-flow-web-six.vercel.app/pt-BR/dashboard

Ticket Sales API – High-Consistency E-Commerce Platform

Designed an e-commerce transactional core engine for real-time ticket sales using Node.js, TypeScript, Express, and MySQL.

- Applied database level transaction isolations and strict concurrency controls to completely eliminate seat double-booking anomalies.
- Developed systematic cron jobs to handle automatic expiration and release mechanisms for temporary seat locks.
- Achieved extensive code coverage with structured integration and unit testing modules via the Vitest environment.
- Restructured existing layers using Clean Architecture boundaries to promote decoupled and maintainable business components.
- Repository: github.com/vivianeaguiarc/ticket-sales

EDUCATION

- Postgraduate Degree in System Architecture and Java Design Patterns – GRAN Faculdade (Completed)
- Bachelor's Degree in Software Engineering – UNIASSELVI (In progress)
- Associate Degree in Systems Analysis and Development – UNIASSELVI (Completed)
